◇ Portfolio ◇+92 310 7111693

OBJECTIVE

BSIT graduate with strong hands-on experience in telecom analytics, SQL, Python, and Power BI. Proven ability to support data analysis, reporting, churn reduction, and revenue optimization initiatives. Experienced in working with cross-functional teams and delivering business-ready insights. Highly motivated to learn and grow in a fast-paced telecom environment.

EDUCATION

BS in Information Technology, Air University Islamabad *2020 - 2024*

SKILLS

Technical Skills: SQL, Excel, MS Office Suite, Python, Power BI, Power Query
Tools and Platforms: Anaconda, MySQL, Oracle SQL, SQL Server (SSMS)
Soft Skills: Adaptability, Problem-Solving, Communication & Presentation, Collaboration, Continuous Learning

EXPERIENCE

Founder & Freelance Entrepreneur — Self-Employed *Jan 2024 – Present*

- Started freelance work as an **Airbnb Co-Host**, managing property listings, guest communication, bookings, and issue resolution
- Launched an e-commerce brand **"Sakoon-e-Shama",** selling candles and room mists through online channels
- Handled business operations, including customer interaction, order fulfillment, and service quality
- Coordinated with partners and clients to ensure timely delivery and positive customer experience
- Developed strong communication, adaptability, problem-solving, and time-management skills

Associate Data Analyst Intern (Remote) — NeoDocto Inc. *Jun 2023 – Sept 2023*

- Analyzed and transformed 50,000+ records using SQL and Excel to support operational and business reporting
- Built Power BI dashboards for stakeholders
- Automated reporting tasks using Python

PROJECTS

Telecom Customer Churn Prediction & Profit Optimization

Tools: Python, SQL (SQLite), Power BI

- Built an end-to-end telecom churn analytics solution using Python, and Power BI on a dataset of **7,000+** customers
- Improved churn detection by increasing churn recall **by ~20%** through class balancing and probability threshold optimization
- Implemented **profit-based decision logic** to identify actionable high-risk customers, reducing unnecessary retention costs.
- Designed a Power BI dashboard with **10+ KPIs** (churn rate, high-risk customers, expected profit) to support management decisions. GitHub

Revenue-Focused Customer Upsell Analytics (Telecom)

Tools: Python, SQL (SQLite), Power BI

- Built an end-to-end upsell analytics solution for **6,000+** telecom customers, focusing on identifying existing users most likely to upgrade plans or purchase add-on services.
- Designed business-driven upsell logic using customer tenure, monthly charges, and service usage, and trained an interpretable **Decision Tree model** to assign upsell probability.
- Integrated model outputs into **SQL (SQLite)** and categorized customers into High / Medium / Low upsell priority, enabling targeted and cost-effective revenue campaigns.
- Developed an executive-ready **Power BI dashboard** showcasing top upsell customers, upsell priority distribution, and revenue potential for business stakeholders. GitHub

SaaS User Analytics & Upsell Strategy

Tools: Python, SQL (SQLite), Power BI

- Analyzed SaaS user behavior and revenue data to identify upsell opportunities.
- Used advanced SQL (CTEs, window functions, cohort analysis) to compute KPIs like ARPU and feature adoption.
- Applied **K-Means** for user segmentation and **Isolation Forest** for anomaly detection.
- Built an interactive Power BI dashboard with KPIs, slicers, and revenue insights for decision-making. GitHub

Air Quality Index (USA) Analysis

- Analyzed multi-decade US air quality data using Python, SQL, and Power BI, performing data cleaning, transformation, and trend analysis.
- Built interactive Power BI dashboards to compare state-level air quality performance and identify long-term pollution patterns.
- Assessed relationships between air quality, population density, and policy interventions to highlight high-risk regions**.** GitHub

Adidas Sales Analysis in PowerBi

- Conducted end-to-end sales and profitability analysis for Adidas, evaluating performance across regions, products, and time periods
- Developed and tracked key business KPIs including total sales, revenue growth, margins, pricing trends, and sales volume
- Utilized data visualization techniques (area charts, filled maps, donut charts, and bar charts) to present insights on sales trends, regional distribution, and product performance. GitHub

EXTRA-CURRICULAR ACTIVITIES

- E-commerce Brand (Sakoon-e-Shama) - Airbnb Co-Host
